

To Whom It May Concern:

### GCI RESTORATION POLICY

Restoration of the property within easements will be performed in accordance with Municipal and State standards. Any existing landscaping in easements that conforms to current Municipal codes will be restored as soon as practical after completion of construction. Natural growth will be allowed to recover on its own. Any clearing required will be done by hand and debris will be chipped and spread for fast regrowth, left for homeowner use or hauled away at the request of the homeowner to be made within 24 hours of completion of all other work.

This means that if we need to plow a lawn within an easement, we will re-tamp sod and reseed if needed; if the lawn must be trenched, we will re-soil and reseed; ornamentals will be replaced. Any trees that must be cut will be hauled off, chipped, or cut up for firewood according to your preference. Wild growth will be cut within easements, hauled off and the wild growth area will be left to revegetate naturally.

Sincerely,

*Rick Williams*
